BH LABS | DEVELOPER HANDOFF DOCUMENT

Landing Page Checklist

Conversion + SEO + AEO — Complete technical & marketing checklist for Recovery Pod landing pages

March 31, 2026 | Prepared for Stephan Coles | v2 — Final merged version

NEW = Added in this version AEO = AI Answer Engine optimization

1. Conversion Architecture

- ☐ **Clear ROI-driven headline above the fold** — specific $ or % outcome, not vague benefits
  e.g. "Add $5–$10 to ADR" not "Enhance Your Guest Experience"
- ☐ **Subheadline removes friction** — address the biggest objection immediately (no staff, fast install, low cost)
- ☐ **Primary CTA visible immediately** — calculator, ROI tool, or "See My Numbers" button above the fold
- ☐ **Hero communicates value within 3 seconds** — if someone bounces after 3s, they should still know the offer
- ☐ **Ad-to-landing-page message match** — headline on page must mirror the ad that drove the click
  Mismatch = high bounce rate = wasted ad spend + lower Quality Score

2. Funnel & Psychology

- ☐ **Loss aversion messaging** — frame the cost of NOT acting (missed revenue, unused space, budget bleeding)
- ☐ **Social proof** — logos (Equinox, Reserve Padel), stats (900+ sessions/mo, 85 NPS), testimonials
- ☐ **Address objections directly** — cost, space requirements, complexity, staff concerns, utilization
- ☐ **Create urgency** — market trend data, early adoption advantage, competitor framing
  "Wellness tourism will exceed $1T in 2024" — Global Wellness Institute
- ☐ **Before/After transformation** — visual or data comparison showing the shift

3. Offer & Lead Capture

- ☐ **ROI calculator or interactive tool present** — personalized numbers > static claims
- ☐ **Email gate on calculator results** — blur premium results (5-year savings, payback period), unlock with email NEW
  Captures leads even if they never reach the main form. Fire Pixel Lead event on unlock.
- ☐ **Multi-step form for higher completion rates** — start with easy fields, progress to qualification
- ☐ **Soft, medium, and hard CTAs** — soft: download brief / medium: request projection / hard: book a call
- ☐ **Lead magnet** — downloadable report, custom projection, or audit offer
- ☐ **Qualification fields** — property type, number of units/rooms/members, role/title
  These fields let you score leads and route them appropriately in HubSpot
- ☐ **Thank-you state / confirmation overlay** — appears after form submit, fires all conversion pixels NEW
  No thank-you state = no conversion tracking = Meta/Google/LinkedIn can't optimize your campaigns

4. Content & AEO Optimization AEO

- ☐ **TL;DR answer block at top of page** — 40-90 words: direct answer + who it's for + one key constraint
  Write it like you want it quoted verbatim by ChatGPT or Perplexity
- ☐ **Question-based headings (H2/H3)** — use actual questions, not marketing labels
  Good: "How much does a Recovery Pod cost?" — Bad: "Pricing Overview"
- ☐ **FAQ section with 4–6 questions** — each answer 40-90 words, self-contained, specific
- ☐ **Use clear numbers, ROI data, and timeframes** — "$49,000 one-time" is citable. "Affordable" is not.
- ☐ **Content structured for AI extraction** — lead with the answer, then support. Short paragraphs (2-3 sentences). Bullet lists for 3+ items. Tables for comparisons.
- ☐ **Cite sources by name** — "According to the Global Wellness Institute (2024)" — AI systems weight sourced claims higher NEW

5. Technical SEO

- ☐ **Unique title tag** — under 60 characters, primary keyword + brand
  `<title>Recovery Pod for Hotels | BH Labs</title>`
- ☐ **Unique meta description** — 150-160 characters, compelling value prop + CTA
- ☐ **Canonical URL set** — self-referencing canonical on every page
  `<link rel="canonical" href="https://bh-labs.com/recovery-pods/hotels">`
- ☐ **Open Graph tags configured** — og:title, og:description, og:image (1200×630px), og:url, og:type
- ☐ **Twitter Card** — `twitter:card = summary_large_image`
- ☐ **Page is indexable** — `<meta name="robots" content="index, follow">` — NO noindex
- ☐ **Alt text on all images** — descriptive, includes relevant keywords naturally
- ☐ **Single H1 per page** — matches title tag intent, contains primary keyword
- ☐ **Logical heading hierarchy** — H1 → H2 → H3, no skipping levels
- ☐ **Semantic HTML** — use `<header>`, `<main>`, `<section>`, `<footer>`
- ☐ **Favicon** — multiple sizes (16×16, 32×32, apple-touch-icon 180×180)

6. Structured Data (Schema) AEO

- ☐ **Organization schema** — JSON-LD: name, url, logo, contactPoint, sameAs
- ☐ **FAQPage schema** — must match visible FAQ section on page. 4-6 Q&As.
  This is the single most impactful schema type for AI answer engines
- ☐ **Product schema** — Recovery Pod: name, description, brand, offers (price, currency)
- ☐ **BreadcrumbList schema** — site navigation hierarchy NEW
  `Home > Recovery Pods > Hotels`
- ☐ **dateModified field** — update every time content changes. Freshness is now a ranking lever. NEW
  AI engines have a strong recency bias — content >3 months old sees citations drop sharply
- ☐ **Validate with Google Rich Results Test** — `https://search.google.com/test/rich-results`

7. Page Speed & Performance

- ☐ **LCP under 2.5 seconds** — directly affects Google Quality Score for paid ads AND organic ranking
- ☐ **CLS under 0.1** — set explicit width/height on all images
- ☐ **Images compressed** — use WebP format where possible
- ☐ **Lazy loading enabled** — `<img loading="lazy">` on below-fold images
- ☐ **CSS and JS minified** — remove whitespace and comments in production
- ☐ **PageSpeed score above 90** — both mobile AND desktop
  Test at `https://pagespeed.web.dev`
- ☐ **Mobile optimized layout** — fully responsive, touch targets 44×44px minimum, no horizontal scroll

8. Tracking & Analytics

- ☐ **Meta Pixel installed** — base code in `<head>` with PageView event
- ☐ **Meta CAPI configured** — server-side tracking (browser-side alone is unreliable post-iOS14)
  Creates a direct server-to-server pipeline for conversion data
- ☐ **Pixel Lead event on form submission** — `fbq('track', 'Lead')` fires on thank-you state
- ☐ **Pixel Lead event on email gate unlock** — fires when user enters email for calculator results NEW
- ☐ **GA4 tracking enabled** — pageview + form submission + calculator interaction events
- ☐ **Google Ads conversion tag** — if running Google Ads, fire conversion on form submit NEW
- ☐ **LinkedIn Insight Tag installed** — required for LinkedIn campaign conversion tracking NEW
  LinkedIn is a primary platform for B2B targeting — Hotels, Multifamily, Athletics campaigns
- ☐ **UTM parameters captured** — utm_source, utm_medium, utm_campaign, utm_content, utm_term → sessionStorage → appended to form data
- ☐ **Form submissions connected to CRM** — webhook POST to HubSpot with all fields + UTMs + page URL
- ☐ **Event deduplication** — if using both Pixel + CAPI, use event_id to prevent double-counting NEW

9. AI Crawler & AEO Access AEO

- ☐ **robots.txt allows AI crawlers** — specifically:
  `OAI-SearchBot` *(OpenAI search)*, `ClaudeBot`, `PerplexityBot`, `Google-Extended` *(Gemini)*, `Bingbot` *(Copilot)*
- ☐ **Check Cloudflare settings** — Cloudflare recently changed defaults to block AI bots automatically NEW
- ☐ **No critical content behind JavaScript** — AI crawlers read raw HTML, not rendered JS
  Tabs, accordions, sliders requiring clicks to reveal content = invisible to AI
- ☐ **No login walls blocking content** — if you want it cited, it must be in the raw HTML
- ☐ **Consider adding llms.txt file** — emerging standard, place in site root
  Simple markdown file that helps AI systems understand your site structure and find key content
- ☐ **Server-side rendering** — if using a JS framework, ensure SSR so crawlers see full content NEW

10. Entity Consistency AEO NEW SECTION

> **Why this matters:** If your pricing, timelines, and brand descriptions disagree across your site, directories, and external sources, AI systems will either skip you or describe you incorrectly. Consistency = trust = citations.

- ☐ **Consistent pricing across all pages** — same number ($49,000) on every landing page, deck, and directory
- ☐ **Consistent deployment timeline** — same timeframe (90 days or 120 days) everywhere
- ☐ **Google Business Profile accurate** — matches website info exactly
- ☐ **NAP consistency** — Name, Address, Phone identical across all directories (Yelp, Apple Maps, etc.)
- ☐ **Brand description consistent** — same core description across site, LinkedIn, directories, review platforms
  If AI sees 3 different versions of what you do, it will skip you or get it wrong

11. Testing & Pre-Launch

- ☐ **A/B test headlines, CTAs, and pricing display** — especially first 3-5 days of campaign
- ☐ **Google Rich Results Test** — validate all schema passes
- ☐ **Meta Pixel Helper** — Chrome extension confirms Pixel fires on load + form submit + gate unlock
- ☐ **Open Graph debugger** — test with Facebook Sharing Debugger + LinkedIn Post Inspector NEW
- ☐ **Form submission test** — submit test data, verify it arrives in HubSpot with correct UTMs
- ☐ **Calculator logic verified** — all sliders work, numbers are accurate, email gate functions
- ☐ **Cross-browser test** — Chrome, Safari, Firefox, Edge on desktop + mobile
- ☐ **All links and images work** — no broken references at final hosted URL
- ☐ **SSL certificate active** — HTTPS with no mixed content warnings
- ☐ **PageSpeed score confirmed** — 90+ on mobile and desktop NEW

12. Tools & Resources

- ☐ **Google Rich Results Test** — `search.google.com/test/rich-results`
- ☐ **PageSpeed Insights** — `pagespeed.web.dev`
- ☐ **Meta Pixel Helper** — Chrome Web Store extension
- ☐ **Facebook Sharing Debugger** — `developers.facebook.com/tools/debug/`
- ☐ **LinkedIn Post Inspector** — `linkedin.com/post-inspector/`
- ☐ **Schema.org Validator** — `validator.schema.org`
- ☐ **Perplexity / ChatGPT** — test your own brand queries to check if you're being cited
